

[illegible]

A container having a cover and a base for holding cosmetics is disclosed. The container includes a hinge having a spring and coupling the cover to the base and configured for pivoting the cover from a closed position to an opened position relative to the base. The spring is in a tensioned configuration when the cover is in the closed position and the spring is in an at least partially relaxed configuration when the cover is in the opened position. A container having a damper coupled to the hinge and configured to limit pivoting of the cover relative to the base at rate of about 90 to 120 degrees per second is also disclosed. A container for holding cosmetics and having a first platform and a second platform. A method for assembling a container for holding cosmetics is also disclosed.
